

MASTERING COLOR ON LEATHER

Training and advice: CTC's "Colour Assistance" program supports the leather industry

With the multiplication of collections and their sequencing, colour control is a constant challenge for the leather industry. Deadlines are getting shorter and shorter. Expectations are becoming more and more precise ! Tanners and manufacturers of finished goods must meet this triple challenge: manufacturing, quality control and performance.

MASTERING COLOR ON LEATHER

Perception

- Discover and understand colors : a subjective perception based on scientific concepts.

The objective of this training is to acquire the fundamentals and the elements of common language between suppliers and principals.

Manufacturing

- Theory and practice of dyeing.
- Color adjustment for leather finishing.

The objective of these training sessions is to optimise industrial productivity and reproducibility.

A global mastering of colors to answer all your technical needs

Color control

- From the light booth to spectroradiometric measurements.

The objective of this training is to master quality control and improve customer / supplier relations.

Performance

- Color diagnosis: evaluation of the color management of a production site.

This business consulting service aims to detect failures to improve the performance of the production site.
