Water resistance

Objective

The purpose of this determination is to assess the water resistance of the luggage. This is used to check that in case of rain, the inside of the luggage stays dry.

Principle

The test involves placing the article under an artificial rain system for a certain time, to check its water resistance.
At the end of the test, we check for any water transit.

Type: Physical and mechanical test
Standard: NF G 92 001 §4.2.2
Product: Luggage
Criteria: Mechanical resistance
