Size and measurement of gloves

Objective

This test measures the chromium quantity in a leather sample.
The test verifies if the sizes of gloves are defined with respect to the sizes of the hands they are to fit.

Principle

The test consists in measuring the maximum length of the glove lengthwise (the glove being flat). The result corresponds to the length conformity according to the intended size.

Type: Physical and mechanical test
Standard: NF EN 420 § 5.1.2
Product: Gloves
Criteria: Mechanical resistance
