# Color fastness to light (each additional 24h)

## Objective

This test is used to anticipate any colour deterioration that might occur due to exposure to light. This test is based on EN ISO 105B02.

## Principle

The test consists of subjecting a specimen to the light of a xenon arc lamp (which reproduces daylight more intensely) besidea set of blue standards, and then using these blue standards to visually assess the colour deterioration of the specimen.

Type: Physical and mechanical test
Standard: CTC method - CTC-P-DV-01
Product: Leather
Criteria: Color fastness
