

Resistance to surface wetting

Objective

This test is used to evaluate leather water repellence

Principle

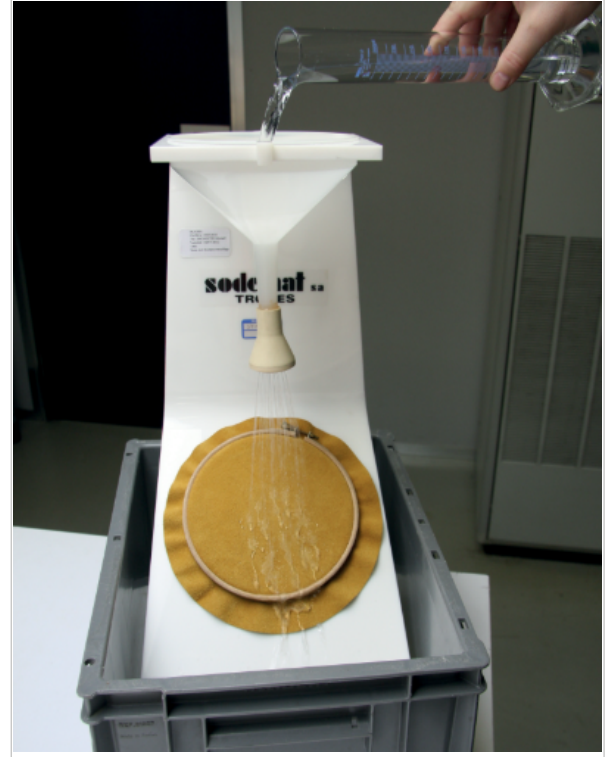

The test consists of applying a standardised spray to a leather sample to be tested. The degree of leather wetting is compared with photographic standards. The final evaluation is made by comparing the appearance of leather with photographic standards.

Type: [Physical and mechanical test](#)

Standard: [EN ISO 17231](#)

Products: [Leather](#) / [Leathergoods](#)

Criteria: [Color fastness](#)
