

## Breaking strength of seams

### Objective

The purpose of this determination is to assess the quality of seams made on luggage items.

### Principle

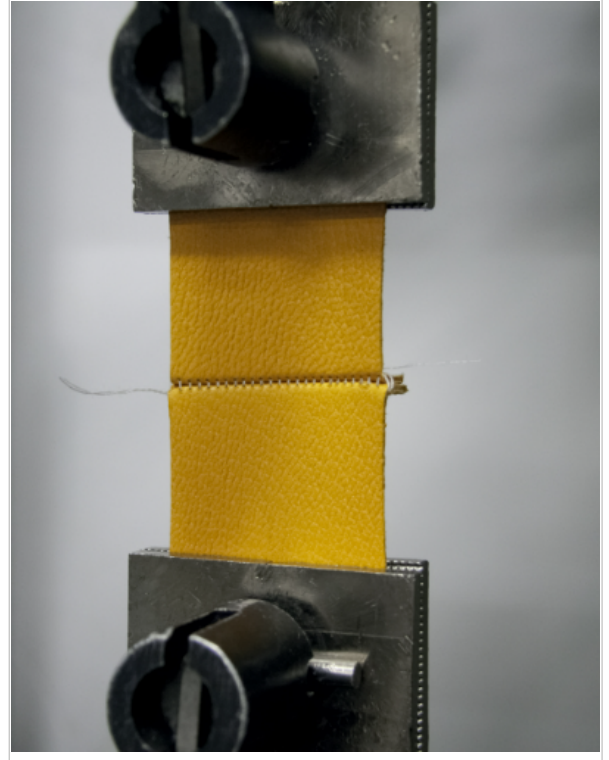

The test consists of applying tensile force to tear open a seam. The test is performed on a dynamometer. The result is expressed in daN/cm (decaNewtons per centimetre).

Type: [Physical and mechanical test](#)

Standard: [NF G 92 003](#)

Products: [Leathergoods](#) / [Luggage](#)

Criteria: [Mechanical resistance](#)
