

Pulling strength of reinforcing rows

Objective

The purpose of this determination is to assess the quality of reinforcing rows on materials.

Principle

The test consists of applying tensile force to break the reinforcing rows subjected to stress when the item is in use. It is performed on a dynamometer. The result is expressed in daN (decaNewtons).

Type: [Physical and mechanical test](#)

Standard: [NF G 92 004](#)

Products: [Leathergoods](#) / [Luggage](#)

Criteria: [Mechanical resistance](#)
