Pulling strength of straps, shoulder strap....

Objective

The purpose of this determination is to assess the quality of straps or shoulder straps, and their attachment to luggage items or leathergoods.

Principle

The test consists of determining the tensile force required to break the straps/shoulder straps, or to break their attachment. The test is performed on a dynamometer. The result is expressed in daN *.

* Decanewton.

Type: Physical and mechanical test
Standard: NF G 92 005
Products: Leathergoods / Luggage
Criteria: Mechanical resistance
